LOGO

x height is the height of the lowercase letters in the company name Just Associates

y height is the height from the top of the bigger star to the bottom tip of the blue silhouette

the distance between the company name and the tagline is 75% of the x height

the top left corner of the “M” in the tag line lines up with the right of the “J” in the company name before the “J” curves at the bottom

The top right corner of the “Y” in the tag line lines up with the right edge of the “s” in the company name

white space above and below the logo equal to 50% y height

white space left and right of the logo equal to x height

DESIGN ELEMENTS

DASHED LINE

The dashed line is an accent design element for print and on screen graphics. The line segments are random and space between segments is no larger than the height of the line. Any of the main or complimentary colors can be used with the dashed line.

HEXAGON

The hexagon is an accent design element for print and on screen graphics. Suggested uses are for backgrounds and bullet points.

BINARY CODE

The binary code graphic is used as a subtle background in combination with other graphics. This graphic is never the main focal point, only a supporting element.

LETTERHEAD

HEADER & FOOTER

The Header and Footer are set up in the document template. The company logo is top left and left aligned with the body copy. The phone number, fax number and address are positioned in the upper right-hand corner and right aligned with the body copy. The Header is underlined with the Dashed Line graphic stretching from left margin to right margin. The same Dashed Line graphic is used in the footer from left margin to right margin and underlines the company URL.

WHY OUTSOURCE EMPI CLEANUP?

Just Associates
MASTERING PATIENT IDENTITY

Is your hospital converting to a new health information system or merging systems with other facilities? Like other provider organizations, perhaps you are planning or implementing an Electronic Health Record (EHR) or a new Picture Archiving and Communication System (PACS). Is your institution on the cutting edge, contemplating or participating in a Health Information Exchange (HIE) or Regional Health Information Organization (RHIO)? Ensuring the effectiveness of these IT initiatives requires an organization to maximize the data integrity of its enterprise master patient index (EMPI) by identifying the duplicate records, correcting them and addressing their causes.

The Little Red Hen in Today's HIT Landscape

You are already working with limited staff and additional resources are hard to come by. Finding, cleaning and fixing up to 20 years worth of duplicate patient medical records is a gargantuan task for staff with other skill sets. When it comes time to clean your organization's MPI, don't be surprised if you find yourself running around like the Little Red Hen in the enduring folktale, asking "Who will?"

But who has the time?

In today's dynamic health care environment, HIM managers don't have adequate time to devote to the myriad of issues demanding their attention. HIM department resources are focused on completing the normal departmental functions vital to the daily operation of the health care facility (i.e. analysis, coding and abstracting and information retrieval/release).

Adding a large MPI cleanup project can tax your management resources and overload existing employees. All too often, when hospital employees are assigned to the duplicate reconciliation task, they are pulled away from the cleanup to address more immediate needs. Mistakes occur and reconciliation efforts are prolonged. The timeline for data reconciliation is limited, driven by the need to get EHR or other systems online.

Just Associates
Your EMPI Cleanup & Maintenance Solution

Outsourcing patient identity management makes sense for hospitals and other health care facilities. You can avoid overburdening your own employees, who, after all, may not have the expertise to undertake large-scale MPI clean up projects. You avoid the time and learning curve that it takes to get your staff up to speed on appropriate processes and procedures.

For example, the tricky "validity" review—the critical decision process to determine if two potential duplicate records really belong to the same patient—is only an easy problem to resolve when the data elements exactly match. Unfortunately, most duplicate records in your system contain data elements that are slightly different.

An employee whose time is temporarily diverted to cleaning up the MPI might not have the experience or insight to resolve such data discrepancy issues. Outsourcing your EMPI

increases the chances of your data reconciliation being completed correctly and on time. You can increase your odds of getting the job done right and by selecting **Just Associates**. We are patient data experts; it is what we do and all we do. Our staff bring project management discipline to all of our MPI projects, along with a history of completing projects on time and within budget. Our managers dig deeper than the causes of your duplicate record issues.

In-depth knowledge of EMPI system platforms and settings and MPI database models. We understand interfaces between systems as well as how data flows can affect other departments' systems. We bring a knowledge to help uncover the root causes of data issues and improve the quality of your EMPI.

EMPI Maintenance Services help you maintain the integrity of your EMPI. It is not enough that you identify and clean up your patient data integrity issues and clean up the records. A diligent approach is needed to maintain the integrity of your EMPI's data over time. Whether it is needed short term support or long term ongoing support, making use of **Just Associates'** trained, credentialed staff can allow you to meet your ongoing EMPI goals while minimizing the burden on your staff.

Just Associates, you get
Trained, Experienced Staff

Reporting from **iDMaster™** provides a complete view of as well as key insight of where problems might be lying. For example, you can determine if duplicate records might be a result of patient registration, helping you determine procedures should be adjusted or performance improved.

Just Associates' reporting also delivers a list of records to merge, a summary of duplicates by data, user and agent, and a report of those records that require update.

Best Practices

JA brings a wealth of HIM and MPI knowledge to the table. Included in this arsenal is best practice expertise for correcting duplicate MRNs garnered from years of experience completing MPI data reconciliation projects across the nation, in every major hospital information system and many clinical and ancillary information systems.

Knowledge Transfer

JA project managers have a wealth of knowledge concerning patient identity data integrity and MPI duplicate cleanup processes and procedures. Our managers glean information about the facility's data during the cleanup project and freely share this knowledge with our clients.

In addition, all processes and procedures are documented for the client's use after completion of the reconciliation project. This assures that you will benefit from our services long after the project is completed.

Quality Assurance

JA's staff is well trained and experienced. We employ strict QA processes and employ dedicated QA Specialists to ensure that you receive the same high quality results for which we are known. **Just Associates** brings value to the equation, tailoring solutions to meet your needs. We can work with you so that your organization benefits from the high-quality and cost-effective alternative we bring to patient identity management. We'll not only make sure the data running through your new systems is clean, we'll show you how to keep it clean.

Just Associates' Services

Just Associates' portfolio of services, including Master Patient Index (MPI) Integrity Assessments, Reconciliations, Data Analysis, Software Solutions and Patient Identity Consulting, helps our customers' systems of duplicate records by implementing process and technology to identify and merge existing duplicates and prevent creation of new ones. Elimination of duplication in the Master Patient Index helps safeguard the patient, clinicians, and hospital by ensuring that clinicians have access to each patient's complete, consistent and accurate medical history.

STUDIES IN SUCCESS

Rethinking Patient Identity Management
A new approach to common problems

About The Children's Hospital

Founded in 1908, The Children's Hospital in Aurora, Colorado is a renowned 314 bed, comprehensive pediatric care facility and Level 1 trauma center. With a bustling main campus, 15 network of care facilities, two emergency care and three urgent after hours care locations, it is at the forefront of research and medical breakthroughs.

Challenge

In 2007, The Children's Hospital (TCH) became the first in the nation to implement a fully integrated pediatric EHR system. However, the new electronic environment exposed patient identity issues that have been hard to rectify. With Epic and Instate plus approximately 70 additional systems on the back end, patient identity management at TCH has become a daunting task.

Melinda Patten, director of health information management, joined the hospital in March of 2009. She inherited a backlog of duplicate records and overlays that was more than her department could handle.

"Patient identity management is a very complicated process with many points of error," shared Patten. "We wanted to get in best practice with managing the EMPI, because patient identity is very important to us."

Adding to the urgency was the financial impact of patient identity errors to the hospital and its facilities.

"One children's hospital has estimated the cost of a record overlay at \$400.00 per record, and that is charged back to the department that creates the issue."

Solution

TCH had one fulltime staff member dedicated to identify management issues and was looking for another line person to help. But Patten soon realized that the real solution would be found only in the prevention of new issues, so she changed the focus of her candidate search.

"I needed to find someone who could do the coordination, find out where the issues were, what they were, and understand if they could be resolved as an institution or if the problems were because of the various nationalities of customers and patients we serve. I wanted someone who could do more than just manage duplicates and overlays... someone who could review and establish processes and communicate to our network of care sites,"

Results

accounts, Patten's instincts paid off. Williams spent time observing the busiest shift in TCH's ER, where she pressed the patient registration process first hand.

"We have seen a reduction in our duplicates for the first time in 8 quarters... a reduction of almost 10%." Williams attributes much of this success to the training he received from JA.

"Training from Just Associates was excellent. It gave me a foundation - a broader understanding of patient identity. It allowed me to come up with a game plan to tackle duplicates and overlays, and I used the training materials to train the ER registration staff and that went very well."

Williams plans to implement more process improvements and looks forward to spending the next few months educating the rest of TCH's registrars on best practices. What's more, he and Patten expect to see continued reductions in patient identity issues as a result of TCH's new patient identity management strategy.

"I wanted to find out why the duplicates were occurring. Through research I found that there was a lot of human error, lots of misspellings of first and last names and transposed dates of birth."

Williams

"...we thought it was really important that they knew us and understood us already, and we didn't want to start over with someone else."

BANNER

All banner graphics will maintain the same rectangular shape and size with rounded corners. The grey stroke and drop shadow are also parts of the rectangular graphic that must stay with each banner. The design elements such as the hexagon shape and binary code can be used as backgrounds and supporting graphics while text and imagery of people that supports the text will be the main focus of the banner.

actual size: 945 x 230 (pixels)

example:

LEARN MORE BUTTONS

The learn more buttons are a yellow rectangular graphic with rounded corners. The hover state of the button is the same shape with a blue fill color. The graphic will always have the centered drop shadow and be right aligned with the text it is underneath.

example:

BACKGROUND GRAPHICS

When a background graphic is needed to highlight an area of text or other information a rectangular shape with rounded corners can be used. When doing this, one of the suggested complimentary colors should be used.

example:

MPI CLEANUP SERVICE

Our MPI Cleanup Services detect, reconcile, and prevent duplicate patient records by using a unique combination of proven data integrity methodologies, unrivaled technology featuring advanced search algorithms, and education on patient access best practices. This integrated approach gives the healthcare professional confidence in their patient data and peace of mind that they are retrieving a patient's entire record. Most importantly, it gives the clinician the information needed to provide quality patient care.

Until now, only their mother could tell them apart...

...with Just Associates' help, so can you.

[LEARN MORE](#)

MPI management is a critical element of any data integrity strategy, because it ensures the clean and accurate patient information that leads to enhanced patient care and safety.

[LEARN MORE](#)

Accurate data integration is the foundation for data integrity. As health information management professionals, we understand the meaning of the data stored and shared among health information systems.

[LEARN MORE](#)

A successful data integrity strategy should look for ways to prevent the creation of new duplicate records. Just Associates provides Patient Identity Consulting services which focus on the patient registration process.

CONTENT SLIDE

The text settings are already configured in the Slide Master. The company logo is placed in the lower left-hand corner. Also, the company URL is placed in the lower right-hand corner in the Title Slide Master. All Titles and Subtitles are to correspond with the presentation and material covered.

(graphic outlined for display purposes)

Text settings to include fonts, colors and sizes are added in the Title Master and Slide Master.

Master Settings are not to be changed unless otherwise directed by Just Associates

iDMaster LOGO

x height is the height of space between the gold line and the “idMaster” name. This space is equal to the space between the gold line and the tag line

y height is the height from the top of the dot of the “i” to the baseline of the tag line

the tag line is aligned on the left with the “i” and aligned on the right with the “r”

registration mark horizontally centered with the far right tip of the “r”

white space above and below the logo equal to 50% y height

white space left and right of the logo equal to 25% y height

WAVE

The blue and gold wave is used as a background image with iDMaster graphics. It can be used alone or in combination with the binary code graphic.

BINARY CODE

The binary code graphic is used as a subtle background in combination with other graphics. This graphic is never the main focal point, only a supporting element.
